

# Juniper a Leader in Gartner's 2019 Magic Quadrant for Data Center Networking. Again.

*Who's on your enterprise shortlist?*

At Juniper, we're committed to improving business outcomes that are most important to you. We are simplifying network complexity with secure and automated multicloud solutions. This, we believe, is why Gartner has named Juniper a Leader in the 2019 Magic Quadrant for Data Center Networking for the second straight year.

Built on a common operating system, our enterprise solutions let you apply consistent, end-to-end policies wherever your applications and data reside. Let us help you achieve your multicloud vision for both today and tomorrow with open, intent- based connectivity for simple, automated network operations.

## AI-Driven Enterprise

### Abstracted control:

- SDN management of devices
- Centralized telemetry and analytics
- Cloud for storage and AI compute

### Automated workflows:

- Programmable APIs
- AI virtual assistants

### AI-driven experience and insights:

- Automate troubleshooting and regulation
- Correlate, predict, identify patterns
- Offer location-based services

## Enterprise Multicloud

### Any cloud:

- Private cloud data centers, virtual data centers, and virtual and public clouds

### Any workload:

- Applications in metal, VMs, containers, and physical and virtual network devices

### Any deployment:

- Greenfield or brownfield, single or multivendor

## Connected Security

### See:

- Multivendor security events
- Multivendor threat intelligence

### Protect:

- Coordinate detection
- Distinguish threats from noise

### Automate:

- Automate host isolation
- One-touch mitigation
- Integration with third-party
